## North Queensland's most valuable and sustainable mineral source helping you super charge your soil!

Natural Rock Phosphate supports sustainable agriculture by providing a slow-release, environmentally friendly source of phosphorus that improves soil health, enhances plant growth, and contributes to higher crop yields from improved soil health.

A natural source of Phosphorus, Calcium and Silica, MLG's natural Rock Phosphate works best in acidic soils by offering a balanced supply of diverse nutrients, including trace elements to stimulate microbial activity and the biodegradation of soil impurities. The natural fertiliser enhances root growth and is a cost-effective solution due to its long-lasting impact, resulting in greater crop yields and overall quality of fruit and flowers.

Miriwinni Lime & Gypsum's Rock Phosphate is available as a loose product or bulk bag. Additionally, MLG offer a full service for the supply and spreading of Rock Phosphate, tailored to meet your requirements.

### Benefits of Using Rock Phosphate

- High source of natural Phosphorus and Silica for plant nutrition
- Slow-release, long-term supply of Phosphorus
- Enhances soil microbial activity
- Balanced nutrient supply of Calcium and trace elements
- Increased root development to increase water & nutrient uptake
- Used for pasture, horticulture and cropping

Discover the key to boosting soil health and crop performance with MLG's Rock Phosphate!
